
Cannot save default ACL

Posted by guzuli - 2014/04/13 21:14

I can set ACL within ARI Quiz but the default settings (in Joomla) do not save.

There is a user group created who has access just only to ARI Quiz component on the backend and if I login with that group I can see everything but cannot add categories, questions etc. When trying to set user permissions the script runs for a long time and does not save the settings at the end. I do not have this issue with other components so I suspect that it is a bug in ARI Quiz.

I use Joomla! 3.2.3 and PHP version 5.4.11

Hello,

On what page do you try to set permissions? Could you provide a temporary access to your J! backend by email so we can investigate the problem?

Regards,
ARI Soft

Thanks, your support was really quick and your advice was correct. The solution took more time - and some money - that my service provider changed the configuration and removed the mod_security limit for number of post parameters. Now it works fine.
