
Learning Path Not working.

Posted by steemer473 - 2010/06/22 19:46

The learning path plugin isn't working right or I didn't configure it right.

I have 4 quizzes:

Chapter 1, 2, 3, and 4

I want to set up a learning path so that a user cannot take a quiz unless they completed a previous quiz. For example, can't take Chapter 2 Quiz until Chapter 1 has been completed. I do not have any content categories, I only have quiz categories. My categories are Chapter 1,2,3,and 4 so I placed all categories into Learning Path #1. Is this the correct way to use this plugin because now it allows you to take the quizzes in random order.

The plugin works for registered users. If you have this problem with registered users, could you provide temporary access to your Joomla! backend by email that we can investigate this issue?

It seems the plugin is working. You can login under 'support' user and check it. I suppose you have strange results under your account because you have started some quizzes under it and haven't finished them yet. In this case, the plugin doesn't check have a user access to selected quiz or not for optimization performance. You can complete not finished quizzes, delete it in 'Quiz Results' section on the component backend and try again.
