
Score and other parameters not calculating

Posted by steemer473 - 2010/06/22 20:27

After taking several quizzes, my score is 0/0. I answered all 25 questions but yet it will not calculate score (e.g. 5/25, etc.). What settings to I need to configure in order for this to calculate correctly?

It seems you haven't set 'Score' parameter in question settings. We suppose 'Score' parameter equals to '0' for all questions in your quiz.

Please disregard this question. I forgot to set value/points of each question to 1 after I imported in all of my questions. Thanks
