
SEO reconfiguration

Posted by dalviolessa - 2014/07/08 13:46

Hi.

My quizzes are actually configured as / as follows:
<http://acheifontes.com/joomla3/2-orcamentonaconstituicao-nivelmediocespe>

I want to configure it as
<http://acheifontes.com/joomla3/simulados/2-orcamentonaconstituicao-nivelmediocespe>

(*simulados is quizzes in portuguese)

Do I have to edit router_ariquiz.php or any other file? Can you tell me how?

Thanks.

Hello,

Do you use any SEO extension on your site?

Regards,
ARI Soft

Do you configure sh404 to use router.php file which is included into "ARI Quiz" package?

Regards,
ARI Soft

No. Is there any step-by-step anywhere regarding this?

See it in sh404 configuration. We can check it if you provide a temporary access to your J! backend by email.
