quizzes now show \"loading\" when working properly

Posted by racmitch - 2014/07/30 15:54

_____

we are having a problem with ari-quiz, we had properly functioning quizzes until last week, now they one-by-one are breaking and showing a "loading" text display, we are using the "quizanywhere" plugin and the syntax is being stripped out and replaced with this code Loading... we have not added nor updated any of the other 3rd party extentions we have previously loaded when all was working correctly, so i'm 100% confident that it's not a 3rd party issue, we changed nothing nor have we updated any extention. However joomla has up dated from 2.5.23(which was buggy) to 2.5.24 in the past 2 weeks which is about the same time we started having trouble. Please advise.

_____

Hello,

It can be a javascript conflict. Where we can see the problem?

Regards,
ARI Soft
