## [FIXED] getting fatal error after Joomla upgrade

Posted by mitchie - 2014/08/04 10:11

---

Hello,

I've Ari Quiz installed v. 3.5.6 and I'm getting a fatal error just after upgraded joomla to 3.3 from 3.1.5.

The error is the following:

Fatal error: Declaration of AriQuizTableQuiz::load() must be compatible with that of JTableInterface::load() in /home/\*\*\*\*\*/public\_html/administrator/components/com\_ariquiz/tables/quiz.php on line 24

The fatal error message appears on from-end with an AriQuiz menü<sup>1</sup> item enabled (quizzes list).

In the back-end, in quizzes pages I get a "Data error." string shown instead of the quizzes list table rows. The same for "Question Categories" and "Question Bank". In "Quizzes results I get again Fatal error: Declaration of AriQuizTableQuiz::load() must be compatible with that of JTableInterface::load() in /home/\*\*\*\*\*/public\_html/administrator/components/com\_ariquiz/tables/quiz.php on line 24.

Any hint?

Thanks in advance

I'm sorry, the upgrade of AriQuiz to the latest 3.6.14 failed and I was sure it succeeded... I've got a doubt writing the version I'm using and checked it out.  
Sorry!

=====

Hello,

The latest version is working fine with J! 3.x

Regards,  
ARI Soft
