
Quizzes results: to be cleared time by time?

Posted by atexo - 2014/08/08 09:09

Hi guys,

as the product is very good, more and more users join my quizzes. Recently the number of saved "Quizzes results" has reached 1.000. I'm wondering if there is a usefull limitation in order to keep the performance on a high level. As the user can save his personal result link via facebook my primary goal is to keep as much results as possible in the database. If there is a recommendation to clear the database time by time then the second question is how to delete the single entries. I would checkmark and delete them in the "Quizzes Result" mask. However i'm not sure if this process really clears everything in the database.

Thanx in advance!

Atexo

Hello,

"Delete" button on "Quizzes results" page delete all data from database which is related to the selected quizzes results.

Hi, thanks for the quick answer. But what's about the maximum entries in order to keep performance stable?

Thanks atexo

1000 or 10000 are not a lot of records, database will work fine with a lot of number of records. "ARI Quiz" tables and SQL queries are optimized.
