
How to make a quiz with many type of questions?

Posted by dodanhkhoa - 2014/10/31 06:46

Example: I have 2 type of question

Type A: 10 questions

Type B: 10 questions

Now, I want to make a quiz with 10 questions which contents 5 random questions of type A and 5 others of type B.

Please tell me how to make type of question and how to select them for the quiz.

Thank you!

Hello,

You can create two question categories inside the quiz. For example category A and category B. Assign 10 question to "category A" and other 10 questions to "category B". Set "Question Count" parameter to 5 in question categories settings. Enable also "Random questions" parameter in quiz settings.

Regards,
ARI Soft
