CSV Importing not Working

Posted by arkhospice - 2015/01/07 14:10

_____

I am trying to import a Question bank CSV. I exported one that was created through the interface on backend. I changed and added my questions using format from downloaded Question Bank. I saved it with same name, and as a .csv and 2003 excel prompts to retain formatting so I do. Then when I try to upload it fails. Is excel adding or stripping something out of this. Can I not use excel to make my mass question bank. I have created the Quiz'z and Quiz categories already on the site so it has a category associated with it for each question to be assigned to. I am attaching my file.

_____

Ok that worked. When I compared it was the blank lines in between? Ok we can adjust that accordingly.

_____

If you want to add an empty rows, it should look like:

,,,,,,,,

number of commas depends on number of columns in a CSV file.
