
Questionnaires

Posted by ilan5555 - 2015/01/11 08:13

Dear friends,

Is it possible to create questionnaires that calculate the results and give answers regarding the calculations?

Thank you!

Ilan.

Hello,

For "Multiple Summing" question type, the extension calculates sum of points for each selected answer.

Regards,
ARI Soft

I need to buy it?
Is there a tutorial for that?

"Multiple Summing" question type is available in "ARI Quiz". You can read here about this question type.

Thank you for your help.

What we need to do is to create a questionnaire in which if the user receives a total of points in a specific range, the student will receive a specific answer.

Lets say if you do the test and receive 20 and there are ranges 1-10, 11-20 and 21-30, the student will receive the answer of range 11-20.

Another question is if we can with AriQuiz do mathematical calculation.

Lets say in question 3, if you choose a solution 2, the score will be 5?

Sorry that my questions are a bit long, but I want to do an Happiness questionnaire so that people can do it and receive their Happiness scale.

Thank you!!!

It is possible to show different text templates at the end of a quiz based on number of earned score in percent. For example show one text template when a user earns from 0% to 22%, another text template if earns from 22% to 50% and etc. Use "Result scale" for this purpose.

Thank you very much,

I will test it.

Sorry for my late reply but I couldn't answer before.

I would like to do a test but the user needs to choose the answers based on the Likert scale format.

Is there a way to do that?

Here you can find a sample of a test that I would like to do.

Thank you again!!

Ilan.

Hello,

You can use "Single question" question type with 5 answers.

Regards,
ARI Soft

Re:Questionnaires

Posted by ilan5555 - 2015/02/24 09:18

Yes, but the question is if I can create a questionnaire which summarize the answers.

Lets say that someone answer two questions - One he choose 3 and the second 4, the total score will be 7.
That way is possible to create a Likert scale format test.

Thanks!

It is possible to set number of score in percent from maximum score for each answer in question settings.

Re:Questionnaires

Posted by ilan5555 - 2015/02/24 09:58

And for a Likert scale format test with many questions should I use the "single question" or "Multiple summing question"?

=====

Re:Questionnaires

Posted by admin - 2015/02/24 10:50

It is possible to select only one answer for "Single question". For "Multiple Summing Question" is possible to select several answers and points for each selected answer will be summarised.

Re:Questionnaires

Posted by ilan5555 - 2015/02/24 11:35

I did what you told me.
I want each answer to have a grade and select only 1 answer.

The problem is that it ask me for a correct answer (100\$).

I sent you the test to see.

Can you please help me with that?

I really don't know how to implement that in Ari Quiz.

If I need to pay for the specific help, I will do that.

Thank you,

Ilan.

Re:Questionnaires

Posted by ilan5555 - 2015/02/24 12:48

But that way it will impossible to calculate all the answers.

If someone do 3 answers from 1-4, the maximum result is 12.

How can it be done the way you suggested?

Again, I don't have problems paying for specific help and implementation.
