
Export Essay answers

Posted by jliddiard - 2015/01/21 19:29

I'm hoping that someone can tell me how to get responses to essay questions to export with the rest of the quiz data. I'm capturing user name, address, email, and phone number as essay questions, and I need it to export to EXCEL so that I can sort and create a mailing list based on user responses. Any help is greatly appreciated! Using Joomla 1.5, but about to migrate to 3 if I can.

Hello,

It requires custom modification of the extension.

Regards,
ARI Soft

Is this something that I can do, or is it not open to the user?

Best,
Jon

Can you lead me to the correct php file? It would help me to not have to sort through all the files to find the right one on my server. Thanks!

See /administrator/components/com_ariquiz/models/quizexportresults.php file.

BTW, if you want to collect user name, email, address and other user's information, it is possible to show a form on quiz description page for guest users. See demo here. It is also possible extend the form and add new fields.

Regards,
ARI Soft

Hello, I'm not finding a quizexportresults.php file under that directory. Would it be in another location?

Re:Export Essay answers

I think that your suggestion of editing the form is the better solution. Thanks!
I've started to edit the PHP files associated with the guest user form, but I'm unsure as to which files to edit to populate the correct labels. I'm also struggling to have it post the user input to the backend of ARI Quiz, so that I could sort the results by 'Name', 'Email', 'Address', or 'Phone'. Could you look at my site and point me in the right direction?

ARI Soft

Re:Export Essay answers

Posted by jliddiard - 2015/01/27 07:15

I've updated that file with the following:

as well as view.html.php with:

```
class AriQuizSubviewQuizFormGuestForm extends AriSubview
{
    function display($quiz, $tpl = null)
    {
        $userQuizModel = AriModel::getInstance('Userquiz', 'AriQuizModel');
        $ticketId = $userQuizModel->getGuestTicketId($quiz->QuizId);
```

```

$data = array('UserName' => "", 'Email' => "", 'mailAddress' => "", 'phone' => "");
$readOnly = false;
if (!empty($ticketId))
{
    $userQuiz = $userQuizModel->getStatisticsInfoByTicketId($ticketId, 0,
array(ARIQUIZ_USERQUIZ_STATUS_PROCESS, ARIQUIZ_USERQUIZ_STATUS_PREPARE), $quiz->QuizId);
    if (!is_null($userQuiz))
    {
        $extraData = $userQuiz->parseExtraDataXml($userQuiz->ExtraData);
        $data = AriUtils::getParam($extraData, 'UserName');
        $data = AriUtils::getParam($extraData, 'Email');
        $data = AriUtils::getParam($extraData, 'mailAddress');
        $data = AriUtils::getParam($extraData, 'phone');

        foreach ($data as $key => $value)
        {
            if (empty($value))
                $data = '';
        }

        foreach ($extraData as $key => $value)
            if (!isset($data))
                $data = $value;

        $readOnly = true;
    }
}
else
{
    $data = AriUtils::getParam($_COOKIE, 'aq_email', "");
    $data = AriUtils::getParam($_COOKIE, 'aq_name', "");
    $data = AriUtils::getParam($_COOKIE, 'aq_address', "");
    $data = AriUtils::getParam($_COOKIE, 'aq_phone', "");
}

```

Which brings up the form field, validates that there is something there, and pushes the user into the quiz. However, the 'title' next to the input field appears as COM_ARIQUIZ_LABEL_ADDRESS and COM_ARIQUIZ_LABEL_PHONE instead of with a proper title. Also, the data captured in those two fields, is not passed to the result table on the backend of ARI Quiz in a formatted column. What do I need to add to correct the titles, and how do I get the captured data to appear in a useable form?

THANK YOU!

1. Add labels (COM_ARIQUIZ_LABEL_ADDRESS and COM_ARIQUIZ_LABEL_PHONE) to /language/en-GB/en-GB.com_ariquiz.ini file.

2. Do you want to show new fields on "Quizzes results" page on component backend? If yes, it requires to extend data grid and add these fields. See \administrator\components\com_ariquiz\controllers\quizresults.php, \administrator\components\com_ariquiz\views\quizresults\view.html.php and \administrator\components\com_ariquiz\models\quizresults.php files.

Thank you for the help!

I'm having an issue with a certificate not generating. This is the error that I receive after passing the quiz and pressing the certificate button:

Fatal error: Class 'JText' not found in
/home/content/u/t/a/utahactt/html/components/com_ariquiz/controllers/quizcomplete.php on line 533

Where can I define the JText class, or point the correct file? Thanks!
Best,
Jon
