Custom Field

Posted by 20myowntutor13 - 2015/02/08 10:47

_____

On taking a quiz, I set it to Anonymous access to NO so everytime a user take the quiz, he/she need to input their Name and Email Address. It is possible to change the email address field to SCHOOL? maybe a dropdown list of school name?

_____

Hello,

It requires modification of the extension. See \components\com_ariquiz\models\forms\quizform\quizform.xml and \components\com_ariquiz\views\quizform\guestform\view.html.php files.

Regards,
ARI Soft

_____

Hi,

I do what you said and add one field names: School Name

on this files

\components\com_ariquiz\models\forms\quizform\quizform.xml and
\components\com_ariquiz\views\quizform\guestform\view.html.php files.

And on the frontend it does, And also I add table column on the backend Shool Name on quizresults/view.html..

But my problem now the school name I input on the frontend to take the take was not showing on my backend quizresults school name column?

Attached is the screenshots both backend and frontend.. http://www.ari-soft.com/images/fbfiles/images/frontend.png

_____

Hello,

Could you provide a temporary access to your J! backend by email so we can check your modification?

Regards,
ARI Soft

_____

I am needing to do something similar to this for reports, We added extra data fields, for a location and name field. I have
variables for both of these, where do I need to modify the code to pull this info into each user that takes test.
Code below is what I added.

new AriDataTableControlColumn(
 array(

```
      'key' => 'First and Last Name',
      'label' => JText::_('COM_ARIQUIZ_LABEL_STAFF'),
      'sortable' => true,
      'formatter' => 'YAHOO.ARISoft.Quiz.formatters.formatUser'
   )
),
new AriDataTableControlColumn(
 array(
         'key' => 'Location',
      'label' => JText::_('COM_ARIQUIZ_LABEL_LOCATION'),
      'sortable' => true,
 )
),
```

What do I need to add code wise to pull these values. into the QuizResults page for reporting.

I am in a Intranet environment so I can not give access, I see the files you modified for OP, what additions did you make to these files to achieve this. Thanks....

_____

I got that lined out displaying in the backend in the fields and populating my variables. How can I get these fields to populate the exported excel we will be using.
