
Using ARI Quiz Anywhere Plugin

Posted by arkhospice - 2015/03/18 17:38

I am using the ARI Quiz Anywhere plugin, and it is cutting off the end of the Quiz, my template is dynamic, and was wondering if there was a way I can modify or why it is not scaling to the Main Body area of the Article in Joomla. See attached image I have circled the edge. This cuts off long worded Questions. We are going to be releasing around 40 test on our Internal Intranet, and I am needing to get this resolved. I displays fine when you load a test directly. Only happens when embedding it.

Hello,

It seems this is a problem with site template styles. Could you send a link to a page where the problem occurs?

Regards,
ARI Soft

I cannot do that it, as this is an internal Intranet site. I have looked over the site template and on Articles can not see a fixed width in the CSS stylesheet. I will continue to comb over some of this, it is a RocketTheme Joomla template, RT_Modulus Template. I can copy and send you the CSS if you know the ones I need to send you. I have also checked the base CSS sheets, it should however be using CSS from template.

Could you reproduce the problem on a public site so we can investigate the problem?

I will see what I can do.... I will do a test site on my personal servers, and load some test data from the current plugin.... I will post a link when done I will use the template on it that I have currently installed on intranet.

I widened my template and it still showed it cutoff with the wider page, I found in the CSS for the quiz where to modify this and it shows correctly now. had to modify my text templates so the results tables weren't so wide.
