import data from Joomla 1.5.6 site

Posted by ilan5555 - 2015/03/20 11:29

_____

Dear friends,

I'm using Ari quiz in a Joomla 1.5.6 site.

I created a new Joomla 3.2 site and I want to transfer the data and test from my old site to the new site.

Is there an easy way to do that?

Thank you,

Ilan.

_____

Hello,

Copy tables with prefix #__ariquiz from J! 1.5 database to J! 3.2 database and install "ARI Quiz" on J! 3.2. Don't forget to replace table prefix.

Regards,
ARI Soft

_____

Dear friends,

I've imported the tables and I can see them on my new database.

Please see here:

http://prntscr.com/6j2ogg

On the component, I cannot see anything

http://prntscr.com/6j2p0y

What else can I do?

Thank you,

Ilan.

Re:import data from Joomla 1.5.6 site

_____

These are not correct tables. Copy table without bak_ prefix (It seems these tables are created by a 3rd party extension, for example by an extension which creates backups).

Regards,
ARI Soft

_____

Sorry,

You are right.

Now it works.

Thank you very much,

Ilan.
