
'Penalty' not taken into account

Posted by DomJam - 2015/04/24 17:02

Hi Team,

The www.test-cerebral.com is happily powered by AriQuizz.

One thing is however not working apparently : the 'penalty' option.

- We have set up a score of 5.00 per question
- We have set up a 3.00 penalty score per question
- Per questions, we have 4 answers 'radio buttons' based, with 'random order on, and where the second answer is always the correct answer (set up Å 100% then)
- we have placed the questions in the 'bank' questions, but there's only 1 category of questions in teh end.

I guess that the penalty score works like that :

- if there's a quiz set up like the above
- where there is 5 questions
- and where a player answer properly to 4 questions
- then his final score should be $(4 \times 5) - 3 = 17$

--> correct ? Or is there a misunderstanding ?

For now, the score is always '20' and not '17'

Configuration issue ? Bug ? Misunderstanding ?

Many thanks for your help in advance,

Best
D

Hello,

Yes, the extension should work in this way. Could you provide a link to a quiz where the problem occurs and a temporary access to your J! backend by email so we can check quiz and questions settings?

Regards,
ARI Soft
