
Clean up ariquizquestionversion in mysql database

Posted by niesomaticus - 2015/05/03 09:34

Good day,

if I edit a question in the administration panel, for example adding a new answer. Then, in the mysql-database, a new data record is created. I have therefore some old records in the database. Is it possible to delete these old entries from the database, that are no longer needed?

Thanks
niesomaticus

Hello,

Previous question versions can be used by quizzes results. For example when a user completed a quiz with old questions versions.

Regards,
ARI Soft

Ah, that makes sense. Is it possible to filter the mysql-database, that only the current versions of the questions are appearing? :unsure:

#__ariquizquestion table contains ID of the latest question version in QuestionVersionId parameter (can be joined with #__ariquizquestionversion table).
