
Multiply users\' score

Posted by DomJam - 2015/05/04 06:53

Hi Team,

I am using Bank Question functionality.

- I have set a certain score per question (5) and I have 32 question in my quizz = 160 points in total

- I want to create a second quizz that will only get 16 questions, but want to keep the same total point, so I need to multiply the users\' result by x2 to keep the same final score (/160)

How and where should I add the \'x2\' instructions?

Many thanks in advance for your help,

D

Hello,

Do you want to change score for questions from 5 points to 10 points for the second quiz?

Regards,
ARI Soft

Hi !

Wow that\'s a fast reply :-)

Answer to your question is \'no\' : I want to keep the 2 quizzes.

- 1) the long one
- 2) short one

... and both need to be \'160\' in the end.

So my guess was that I needed to not change the question score but the way one of them is calculated...
If this is not possible, I guess I would be forced to duplicate all the 101 questions (more are coming) of the \'long quizz\' and change the score of those copies up to \'10\' . But I would like to avoid this as this is gonna be a pain to maintain the DB of questions in the future... Being able to just change the score before it is displayed for the shorter quizz would be much better...

Possible ? How ?
Many thanks for your help !

D.

The extension uses score which are defined in questions settings. If you want to define another score for questions from question bank for a quiz, populate quiz with questions from question bank (use "From bank" button on quiz questions page) and then use "Mass edit" to change score for the selected questions.
