
ARI QUIZ learning path 2 course in the same joomla

Posted by Paulob - 2015/05/26 14:15

Hello Ari Support. I have two courses in the same joomla and would like to use ARI Quiz Learning Path for each of them. For example mathematics course has mathematics 1, 2 and 3. Using the learning path, students only does the math exercise 2 if he complete the math 1. Well, now I have another course of English 1, 2 and 3 is the same mathematics course of the process. That way I could use the ari quiz learning path because I have to use ari quizzes root to make the call to exercise, and when I do that, it appears the English exercise also ultimately to use the learning path have to create at least 2 categories of exercises home course.

thank you

Hello,

"ARI Quiz Learning Path" plugin supports till 20 different learning paths.

Regards,
ARI Soft

We know that, then explain to us how to make the call in different categories and set the learning path without using quizzes as in math exercise I need to call the mathematical exercises one that belongs to category 1, then the math exercise that belongs to category 2. But when the student comes to the exercise also appears the English exercises 1 and 2 too. we do not want to appear the English exercises to who is doing the math. The problem is time that we need to call the exercises using the menu where you configure the quizzes. Or he calls the root here comes all categories or he calls one category only, which does not satisfy us, since we have more than one category for math exercise.

It is possible to create two categories under "Root" category (for example "Math" and "English") and add sub-categories to these categories (for example "Math 1", "Math 2" and "Math 3" to "Math" category and "English 1", "English 2" and "English 3" to "English" category). Create two menu items, one will be shown quizzes from "Math" category (and all sub-categories) and another one will show quizzes from "English" category.

Regards,
ARI Soft
