
Ariquiz Error

Posted by Nick Starbright - 2015/06/19 05:32

Hello, some months back I purchased Ariquiz. I've been working on the performance of my joomla 3.4.1 installation when I received this error message:

Strict Standards: Only variables should be assigned by reference

/public_html/plugins/system/ariquizreloader/ariquizreloader.php on line 28

:(I took a look at it and here's what it said on line 28

```
$document =& JFactory::getDocument();
```

Which is part of this block of code:

```
class plgSystemAriquizreloader extends JPlugin
{
    function plgSystemAriquizreloader(&$subject, $config)
    {
        parent::__construct($subject, $config);
    }

    function onAfterDispatch()
    {
        $mainframe = JFactory::getApplication();

        $document =& JFactory::getDocument();
        $doctype = $document->getType();

        if ($mainframe->isAdmin() || $doctype !== 'html') return ;

        $option = JRequest::getCmd('option');
        $task = JRequest::getString('view');

        if ($option != 'com_ariquiz' || $task != 'question')
            return ;

        $version = new JVersion();
        $isJ16 = version_compare($version->getShortVersion(), '1.6.0', '>=');

        $document->addScript('plugins/system/' . ($isJ16 ? 'ariquizreloader/' : '') . 'ariquizreloader/js/init.min.js');
    }
}
```

How do I correct this error so it goes away? :)

Thanks in advance for your assistance!

Hello,

Replace the following code:

```
$document =& JFactory::getDocument();
```

with the following one:

```
$document = JFactory::getDocument();
```

Regards,
ARI Soft
