
Hot Spot Quiztype

Posted by rudi - 2015/09/01 13:12

Hi,
just one small styling issue. When showing the results, the correct answer space is not clearly distinguishable from the "wrong" space. (see in the attached image. the cell "dem Aufgabe" should be marked correct)
My question is: where can i apply additonal css code to edit the "correct space" in the results?

Thanks

Hello,

Add the following CSS rule to a site template CSS file to change opacity and background color of correct answer's area:

```
.aq-question-explanation .aq-hotspot-wrap>DIV:first-child {opacity:0.9!important;background-color:green!important;}
```

Regards,
ARI Soft
