Hello,

Does it occur when get test in the same browser on the same device or on different machines?

Regards,
ARI Soft

This is a standard behaviour of the extension. It remembers previous data of guest user and populate it when a user starts a new quiz session. It works only on the same browser on the same device.

If you want to disable this feature, open /components/com_ariquiz/views/quizform/guestform/view.html.php file and remove the following code in "display" method:

```
if (!empty($ticketId))
{
...
}
else
{
...
}
```

Regards,
ARI Soft
