Questions with % correct answers
Posted by The Cheadle Academy - 2015/10/15 09:07

_____

Hi,

Love the quiz module (as you have probably guessed), however I must be doing something wrong when it comes to the multiple choice questions and giving out a % of the total marks. For example, if the user say selects 2 out of 3 options that are correct, I would want them to get 2 out of the total 3 marks available.

I have assigned the % for each answer in the question, however it still does not seem to be working. The user has to either get them all right for the marks, or one wrong option and they are getting no marks.

I am assuming this is something that I am doing wrong so it would be helpful if you could explain my mistake.

_____

Hello,

Could you specify what question type you use and send screenshot(s) of question settings page?

Regards,
ARI Soft

_____

Hi,

Its a multiple question and have have attached a screen shot of the question set up. As I understand it, this should be giving 1 mark for each correct answer, however it is marking everything as 0 marks, unless you get the 2 exactly right.

_____

A quiz taker earns point for multiple question if select all answer(s) which are marked as correct otherwise he earns 0 point or get a penalty.

If you want to set some points for each answer separately, use "Multiple Summing" question type.
