
Drag and Drop Questions on a Android Mobile

Posted by The Cheadle Academy - 2015/10/29 15:21

Hi,

Some of my users on mobile phones are staying that on Android the drag and drop questions do not work. They say they are unable to move over the boxes to the correct section. Is this something that can be fixed? It does appear that more and more users are using mobile to complete quizzes and I am hoping this is something that can be addressed? I know how good you are at support.

Hello,

The extension is compatible with mobile devices. Do you use the latest version of the extension? Is it possible to see the problem anywhere?

Regards,
ARI Soft

I will have to ask one of my students to show me, however a few with android appear to be finding it impossible to complete drag and drop questions on a phone.

Accordion to our previous post, do you use the latest version of the extension? Is it possible to see the problem anywhere?
