
PDF Certificate size

Posted by robemo - 2015/11/01 14:25

Hi, I am having problems with getting the PDF size correct. I tried with div and table but is never shows well in the PDF. Even a image slised in Photoshop with just { \$UserName } in the middle will not work

Is there a standard image size i need to stay with? I just want it to be A4 Landscape size but it is or to big or shows the text on the wrong places or cuts it even in 10 pages when using div.

Last try to add an attachment - damn what a restriction on an image :-) http://www.ari-soft.com/images/fbfiles/images/1_11_2015_15_26_02.jpg

Hello,

Here (see question #8) is described how to change orientation in PDF document. If it doesn't help, could you provide a link to a page where the problem occurs and a temporary access to your J! backend by email so we can investigate the problem?

Regards,
ARI Soft
