
Quiz frame buggy

Posted by rudi - 2016/01/29 19:25

Hi, I have a question regarding the Quiz frame.

In the screenshot you can see that the Quiz frame doesn't extend long enough to cover the whole height of my quiz. If I set {ariquizanywhere quizId="17" scrolling="no" }{/ariquizanywhere} to {ariquizanywhere quizId="17" scrolling="yes" }{/ariquizanywhere}, then I can see a scroll bar which is very inconvenient and feels very clumsy because I have a scroll bar for the quiz and a main browser scroll bar.

I would love to have scrolling="no" but show the WHOLE height of the quiz for however long the quiz is.

Hello,

Check your mail. We have sent the updated version of "ARI Quiz Anywhere" plugin.

Regards,
ARI Soft

Hello,

I didn't get the mail. I checked the spam folder as well. Could you resend it to the adress in my profile? And I just install the updated ARI Quiz Anywhere plugin via Joomlas Extension Install Manager?

Thanks

Hello,

We re-sent the plugin from our secondary email.

Regards,
ARI Soft
