# Question content javascript conflict?

Posted by illes635 - 2016/03/20 14:48

_____

Hi,

I'm experimenting with content plugins in question content. It parses well, everything appears how it should.
However I have javascript issues: functions and variables not defined, etc. Same content plugin parsed on article page
has no javascript error.

Is there any general method to avoid content plugin javascript conflicts with Ari quiz javascript?

Thanks!
IllÃƒÂ©s

_____

Hello,

Some javascript errors can occur, it depends on implementation of plugins. The extension loads questions via AJAX and
plugin code is executed and embed into page dynamically on client side. Some plugins might not support it.

Regards,
ARI Soft
