ARI Quiz themes Posted by evga99 - 2016/04/15 13:19
Why if I copy folder with default theme (.\components\com_ariquiz\themes\default\) to another folder (.\components\com_ariquiz\themes\light\) and after set it (Light) theme in ARI Quiz settings ("Default theme" parameter), when you call the plugin from front-end it will gives an error 500?

Hello,
It seems a new theme is implemented incorrectly and a PHP error occurs. Check PHP error log on your server or send your theme by email so we can investigate the problem on our test server.
Regards, ARI Soft
Re:ARI Quiz themes Posted by evga99 - 2016/04/18 07:43
Solved. This happens only if you name the template (folder) "light", with other names there is no such a problem
Re:ARI Quiz themes Posted by admin - 2016/04/18 11:11
It seems this a problem with 3rd party extension or server configuration. The extension doesn't have this limitation for theme name.
