
Insert results in DB table after quiz finish

Posted by niki - 2016/06/19 13:45

I'm posting new thread because something happened with the old one (404 error) <http://www.ari-soft.com/ARI-Quiz/56767-Change-the-generated-PDF-Certificate/Page-3.html>

I need your help with this task:

In Ari Quiz 2 there was file called quiz_finished.php. The file was located inside /public_html/components/com_ariquiz/frontend_pages

We use to have little code inside this file something like this:

```
$query = "INSERT INTO `xxxx_ariquiz_students` (`students_name`, `students_certification`,  
`students_certification_number`, `students_country`, `students_date_passed`) VALUES('{$result}', '{$items->Certification}',  
 '{$items->CertificationNumber}', '{$items->CountryName}', '{$result}')";
```

So when user successfully pass the quiz his data is inserted in this table: xxxx_ariquiz_students

Hello,

See "markQuizAsFinished" method in /administrator/components/com_ariquiz/models/userquiz.php or create a system plugin, subscribe to "onEndQuiz" event and execute the code in event handler.

Regards,
ARI Soft

Re:Insert results in DB table after quiz finish

Posted by niki - 2016/06/19 14:32

In the old file i can see this:

```
AriEventController::raiseEvent('onEndQuiz', $result);
```

But i can't find this line of code inside userquiz.php

=====

Re:Insert results in DB table after quiz finish

Posted by admin - 2016/06/19 14:43

See /components/com_ariquiz/controllers/quizcomplete.php file.

Regards,
ARI Soft

Re:Insert results in DB table after quiz finish

Posted by niki - 2016/09/29 15:30

Can you tell me where is that:

markQuizAsFinished

Ok. I found it in

```
function markQuizAsFinished($ticketId, $userId = 0)
{
    $db =& $this->getDBO();
```

But how I can insert the code?

```
$query = "INSERT INTO `xxxx_ariquiz_students` (`students_name`, `students_certification`,
`students_certification_number`, `students_country`, `students_date_passed`) VALUES('{$result}', '{$items->Certification}',
 '{$items->CertificationNumber}', '{$items->CountryName}', '{$result}')";
```

=====

Re:Insert results in DB table after quiz finish

Posted by admin - 2016/09/29 17:05

If you need some data from \$result variable (\$resultInfo), place your code after
AriEventController::raiseEvent('onEndQuiz', \$resultInfo); code in /components/com_ariquiz/controllers/quizcomplete.php
file.

Regards,
ARI Soft

Re:Insert results in DB table after quiz finish

Posted by niki - 2016/09/29 18:53

I try to put the code there and it didn't work (didn't create the record into the student DB

=====

Re:Insert results in DB table after quiz finish

Posted by niki - 2016/09/29 18:59

Again. I'm trying to accomplish this:

When the quiz is over (no matter if the time run out or the user hit save on the last question) the system to record this
student data in one DB table we created. This is the query we are using right now:

```
$query = "INSERT INTO `xxxx_ariquiz_students` (`students_name`, `students_certification`,
`students_certification_number`, `students_country`, `students_date_passed`) VALUES('{$result}', '{$items->Certification}',
 '{$items->CertificationNumber}', '{$items->CountryName}', '{$result}')";
```

=====

Re:Insert results in DB table after quiz finish

Posted by admin - 2016/09/29 19:02

This is a problem with this code. At least \$resultInfo variable is available in the file instead of \$result and it seems \$items is your own variable. We can recommend to enable "Development" mode in Joomla!, check web server error log and error in DB object.

Re:Insert results in DB table after quiz finish

Posted by niki - 2016/09/29 20:02

I send you the full code later today from the file. If you see the file you will see the code make sense

=====

Re:Insert results in DB table after quiz finish

Posted by admin - 2016/09/30 06:44

Obviously this is a problem with custom code. Use recommendation from our previous to find an error and correct it.

Regards,
ARI Soft

Re:Insert results in DB table after quiz finish

Posted by niki - 2016/09/30 11:58

I'm asking you for a help 1 time per year... I didn't see any errors that's why i'm posting in the forum.

I put the code where you recommend me to put it but is not working. And is not producing any errors

=====

Re:Insert results in DB table after quiz finish

Posted by niki - 2016/09/30 15:11

Where the certificate are record? Or if not how to make them available?

When someone click on the Certificate button this certificate to be recorded inside folder in Ari Quiz?

=====

Re:Insert results in DB table after quiz finish

Posted by admin - 2016/09/30 15:35

Certificates are generated when "Certificate" button is pressed or when attached to email, it is saved to a temporary file which is deleted when page is destroyed.

Regards,
ARI Soft

Hi,
We need help with something. IS there any way we can insert Country in this file? Before we use the Virtuemart table for the student country. Can you help me with this?

Before we use this: xxx_virtuemart_countries.country_3_code AS 'Country',

```
JOIN kxmk_virtuemart_countries  
ON kxmk_virtuemart_userinfos.virtuemart_country_id = kxmk_virtuemart_countries.virtuemart_country_id
```

How can we import that code in Ari Quiz 3?

=====

Re:Insert results in DB table after quiz finish

Posted by niki - 2017/02/15 15:51

We have this so far inside quizcomplete.php

```
if ($resultInfo)  
{  
  
    $query = "INSERT INTO `kxmk_ariquiz_students` (`students_name`, `students_certification`,  
`students_certification_number`, `students_country`, `students_date_passed`) VALUES('{ $resultInfo}', '{ $resultInfo}',  
'{ $resultInfo}00', '{ $resultInfo->CountryName}', '{ $resultInfo}')";
```

How to put the xxx_virtuemart_countries.country_3_code AS 'Country',

```
$query="SELECT #__ariquizstatisticsinfo.*,xxxx_virtuemart_countries.country_3_code AS 'CountryName',
```

Thanks

Re:Insert results in DB table after quiz finish

Posted by admin - 2017/02/15 20:10

Hello,

It is not clear what's difference in your code between "ARI Quiz" v. 2.x and 3.x. 'Country' is retrieved from VirtueMart extension.

Regards,
ARI Soft

=====

Re:Insert results in DB table after quiz finish

Posted by niki - 2017/02/15 20:19

This is the code you provide for Ari Quiz 3

We have this so far inside quizcomplete.php

```
if ($resultInfo)  
{  
  
$query = "INSERT INTO `kxmk_ariquiz_students` (`students_name`, `students_certification`,  
`students_certification_number`, `students_country`, `students_date_passed`) VALUES('{ $resultInfo}', '{ $resultInfo}',
```

'{\$resultInfo}00', '{\$resultInfo}')";

I want to add this to that code '{\$resultInfo->CountryName}',

But is not working because the country name is from Virtuemart. But on Ari Quiz 2 we extract that data like this:

```
$query="SELECT #__ariquizstatisticsinfo.*,xxxx_virtuemart_countries.country_3_code AS 'CountryName',
CONCAT(CONCAT(__ariquizstatisticsinfo.StatisticsInfoId,'0'),
#__virtuemart_userinfos.virtuemart_country_id AS 'Country',
FROM #__virtuemart_userinfos
JOIN xxxx_virtuemart_countries
ON xxxx_virtuemart_userinfos.virtuemart_country_id = xxxx_virtuemart_countries.virtuemart_country_id
WHERE #__virtuemart_userinfos.virtuemart_user_id=".$user->id."
order by #__ariquizstatisticsinfo.StatisticsInfoId desc limit 1";
```

So my question is how to implement this in Ari Quiz 3 in the above code

I send you the email with the full code from Ari Quiz 2

=====

Re:Insert results in DB table after quiz finish

Posted by admin - 2017/02/16 06:33

Could you explain what problem with the second query? "ARI Quiz" contains #__ariquizstatisticsinfo table which is used in it, according to the query other data is loaded from VirtueMart tables so if VirtueMart tables the same, the query should work.

Regards,
ARI Soft

Re:Insert results in DB table after quiz finish

Posted by niki - 2017/02/16 13:12

I try it like this

```
if ($resultInfo)
{
```

```
$query = "INSERT INTO `xmk_ariquiz_students` (`students_name`, `students_certification`,
`students_certification_number`, `students_country`, `students_date_passed`) VALUES('{$resultInfo}', '{$resultInfo}',
'{$resultInfo}00', '{$resultInfo->CountryName}', '{$resultInfo}')";
```

```
$query="SELECT #__ariquizstatisticsinfo.*,xxxx_virtuemart_countries.country_3_code AS 'CountryName',
```

But is not working. That's why i'm asking you hot to put it the correct way?
