
CSV Import

Posted by niki - 2016/08/28 14:38

I know the question will sound too broad but what is the easiest way to make the CSV file in ari quiz format? I have PDF's with the questions and answers and I want to make them in CSV format to import them to ari quiz. Do i have to copy and paste them or there is better and faster ways? Right now i download the CSV file from your documentation and copy from my PDF and paste it to the CSV file but one by one. This is very long process... Is there any better way? Like some sort of format software...

Thank you

Hello,

It requires to create a tool which will extract data from PDF files and convert it to CSV.

Can you tell me the idea of your CSV file? Why the format is like that?

We added ability to import/export to/from CSV files because customers requested this feature. CSV is a simple text format and CSV files can be edited in any text editor and it doesn't require any special software (or can be edited in applications like Excel, Open Office).
