
Multiple Choice Questions Type error

Posted by christer - 2016/09/21 10:13

When I add Multiple Choice questions type, the candidate answers do not appear on the quiz next to the choices. Only the Choice 1 and Choice 2 appear. I attach a screen shot.

Hello,

Could you resize the screenshot or send it by email?

PS: Could you also provide a screenshot of question settings page and if possible a link to a quiz where the problem occurs (it can be a conflict with site template style for example)?

Regards,
ARI Soft

it worked. What I did was write down the questions through the editor by opening the editor and not by typing the question in the box. Thanks for your reply

I have one more problem. In Multiple Questions, the player of the quiz has the ability to choose more than one answers. I want the quiz to restrict the user to only one answer. Can you also support me on this please?

"Multiple question" question type is used when necessary to select several answers to earn score. "Single question" question type is used to select only one answer.

Regards,
