
Strict Errors, PHP 5.4 and Joomla 3.6+

Posted by xmanflash - 2016/11/21 02:10

Hi, this error and about 5 others exist so far when I installed AriQuiz..

Strict Standards: Non-static method AriUtils::getParam() should not be called statically, assuming \$this from incompatible context in /home/xxxxxxxx/public_html/components/com_ariquiz/router/router_ariquiz.php on line 153

I would rather not have to turn of strict errors in the admin for now. Are these going to be fixed?

Cheers,
Pete

Hello,

Do you use "ARI Quiz" v. 3.9.3?

Regards,
ARI Soft
