
Get user results with BankQuestionId

Posted by militosconsulting - 2016/12/10 10:51

Hi,

I have a strange request for quiz results and I really need help on that.

I have 3 quizzes with 12 questions each.

and I want to get results for user summing 1 question from each quiz.

So what I did is add the questions to the same bank in order to group the results.

The scenario is as follows

Quiz 1	Quiz2	Quiz3	RESULTS
--------	-------	-------	---------

Q1_q1_(bank1)	Q2_q1_(bank1)	Q3_q1_(bank1)	Result = Q1_q1(bank1)_Score + Q2_q1_(bank1)_Score + Q3_q1_(bank1)_Score
---------------	---------------	---------------	---

Q1_q2_(bank2)	Q2_q2_(bank2)	Q3_q2_(bank2)	Result = Q1_q2(bank2)_Score + Q2_q2_(bank2)_Score + Q3_q2_(bank1)_Score
---------------	---------------	---------------	---

Q1_q3_(bank3)	Q2_q3_(bank3)	Q3_q3_(bank3)	Result = Q1_q3(bank3)_Score + Q2_q3_(bank3)_Score + Q3_q3_(bank1)_Score
---------------	---------------	---------------	---

Q1_q4_(bank4)	Q2_q4_(bank4)	Q3_q4_(bank4)	Result = Q1_q4(bank4)_Score + Q2_q4_(bank4)_Score + Q3_q4_(bank1)_Score
---------------	---------------	---------------	---

etc...

I noticed that the question information and the BankQuestionId are in table "ariquizstatistics"

I am having really hard time to query the database with all fields and tables.

Can you please help me on that ?

Thank you

=====

Hi,

I think I found it.

In case someone else needs that, this is the query :

```
$query = "select t.`QuestionCategoryId`, sum(maxScore)\n"
```

```
. "from (\n"
```

```
. "SELECT a.`QuestionCategoryId`,max(c.score) maxScore,b.UserId,c.`BankQuestionId` FROM `tct_ariquizstatistics` c\n"
```

```
. "join `tct_ariquizquestion` a on c.`BankQuestionId`=a.`QuestionId`\n"
```

```
. "join `tct_ariquizstatisticsinfo` b on b.`StatisticsInfoId`=c.`StatisticsInfoId`\n"
```

```
. "WHERE a.`Status`=1 and c.`Completed`=1 and b.UserId = " . $userId . ".\n"
```

```
. "GROUP BY b.UserId,a.`QuestionCategoryId`,c.`BankQuestionId`\n"
```

```
. " ) t\n"
```

```
. "GROUP BY t.`QuestionCategoryId`";
```

Now the only think I need to do is to embed after the test is finished.

Hello,

It is possible to create a plugin which will add a new placeholder to text text templates (for example {Total_Stat})

placeholder will be replaced with data which will be generated by the plugin). If you are familiar with PHP, we can send a sample plugin by email and you can modify it for your needs.

Regards,
ARI Soft

Hi,

Thank you for your answer.

Please send my the Sample plugin !

Thank you very much

Hi,

Sorry, there is a problem with the server indeed.

I updated my email address.
Can you please try to my new email address ?

Thank you
