
Certificate customization

Posted by Toktassynov - 2016/12/19 21:49

Hello, dear Admin! I am happy to use an ARI Quiz. It's much better than Lite version. Although I still have some issues.

Please help with following:

1. When I try to generate PDF I got strange symbols (probably it's not Cyrillic-friendly). How to fix it?
2. I got NO background image in certificate pdf, although I have specified detailed url for the image like <http://domain/images....>What is the problem?
3. My certificate is supposed to be an album-oriented, but instead I have portrait-oriented. How can I change it?

For all the issued please see attached file. Thank you very much in advance. http://www.ari-soft.com/images/fbfiles/images/certificate_error.PNG

One more question Admin: I need to show \$EndDate in format like "mm.dd.YYY". I stumbled across you given solution which is {\$EndDate|date_format:m-d-Y}, but that seems to be not working.

Hello,

1. We will send the fix for this problem within 24 hours.
2. Could you provide a link to a quiz with the certificate and a temporary access to your J! backend by email?
3. Add the following code to certificate template:

{@doc_format:landscape}

4. About date formatting, use the following code in Joomla! 2.5:

{ \$EndDate|date_format:%m.%d.%Y }

Regards,
ARI Soft
