Quiz phone requiered

Posted by sarcas28 - 2017/01/19 13:21

_____

Hello,

I want to ask how its possible to add in the user details secction on frontend(when the user need to type the Name box and E-Mail box) its possible to add the phone number box? How to do this? How to include this and what files .phps need to edit and sql to insert and record the user phone number and finnaly this record show in quizez results table?

Thank you a lot!

PD: Sorry for my bad english.

_____

Hello,

See /components/com_ariquiz/models/forms/quizform/guestform.xml file. It is used to build form for guest users.

Regards,
ARI Soft

_____

Ok. But i need to stock this box (inserted prev. in .xml file) in a sql table and after this need to see what phone number typed by user in quiz ressult or email template params ($userphone) for example...

I need to modify the Guest Form (insert a new phone box)
The imputed data will be sended to SQL
This data could be showed in quiz results or could be inserted in Mail Templates

To do this what files (.xml or .php and sql) need to modify? Its possible to include this in the next update? Or provide me the code to instert because i need to include this data in my quizez because i used ARI Quiz to do a Level Test. Many users donÂ´t be contactable via Mial and via email the latency is very big.

Thank you a lot!

PD: Sorry for my bad English.

_____

It is possible to show data from the form into text (mail, print) templates. For example if field name is "Phone", use {$ExtraData:Phone} variable in a template.
