
Special Plugin for Ari Quiz

Posted by enginbasturk61 - 2017/02/22 16:44

Is it possible to create a plugin which can be inserted in articles and quiz description which can show some results of the users..

Like category result as {category_result} or something else

Quiz result: {quiz_result}

So we can show students in each category how much points they have and also when they go to any quiz they can see how much points they have collected in that quiz

=====

Hello,

Should it show earned score for currently logged user? For example for all quizzes from the selected category or for the selected quiz? If a user takes the quiz several times, should it show the best result or sum of all results?

Regards,
ARI Soft
