
Paging Separate by Categories

Posted by enginbasturk61 - 2017/03/15 05:44

Hi!

I want to create a quiz which will get questions from different question categories.

I have created some categories which contains easy, normal and difficult questions...

When a select (for quiz) Separate by Categories, questions are coming category wise but random categories..

I want to manage categories like from easy to difficult...

It is possible that categories will come according to id of the questions categories not randomly...

=====

Hello,

Currently it is not possible, we are going to add ability to change categories ordering in "ARI Quiz" v. 4.x.

Regards,
ARI Soft
