
Multiple Values For Question Scores

Posted by mbigley - 2008/07/15 22:22

Is there a way to provide multiple values to answers? For example, I want someone to rate their response from 0 to 5 and assign the same score to their total (if they answer 0, the score is 0, etc.)

Thanks!

-Mike

Hello,

Thanks for your interest in ARI Quiz component. There is no such functionality right now. But we will think about including such useful feature in one of the future releases.

Regards,

ARI Soft
