Special characters Ã¤, Ã¼ inside the producing cert

Posted by niki - 2017/04/05 17:26
_____

Hi,
We have some users who are using special characters in they name. So every time when they produce the certificate these Special characters become? or some other crazy symbol.

Is there any way I can fix that? Adding new special character library or something? We are inserting the username like this: {$UserName}

Hello,

The extension uses DOMPDF library to generate PDF documents. If want to use non-English characters it requires to add a font with unicode support. As we know, you use modified version of "ARI Quiz" so we can't provide full installation package with the font for you, but we can prepare an archive with all necessary files and provide instructions how to install it. Is it suitable for you?

Regards,
ARI Soft
