
ARI Quiz variables To SP Pagebuilder module

Posted by stepan39 - 2017/04/21 07:43

Hello!

SP Page Builder has smart formatting tools without creating additional styles.

I widely use text templates to output various results and wanted to do so:

In the text template, specify just the output of the module, for example {module 198}

This works, but unfortunately, the output does not handle the variables.

Imagelink: <http://joxi.ru/J2b4dOdcPJJMr6>

Is there any solution to the problem?

Hello,

Do you want to execute Joomla! content plugins on text template content and then replace predefined variables in result content?

Regards,
ARI Soft

Yes. The picture shows the module that I displayed using {module 198}
