
Question ari quizzes erro

Posted by Paulob - 2017/06/20 00:02

Hi,
I am creating a quiz and when I click on the question the following error appears
0 Call to a member function getName () on boolean

The screen is completely unconfigured

Thanks

Hello,

Check that you use the latest version of the extension (3.9.8).

Regards,

Hello, we made the update to version 3.9.8, but the problem continues. Can I give you a username and password to check what's going on? If you can send information by email.
We created a group and created several questions to insert into this group, but then when trying to get into the issue of an error unconfiguring the entire page.

Thank you

Could you provide a temporary access to your J! backend by email and specify where we can see the problem (link to question)?

Regards,
ARI Soft

I have this error too. I have the latest version. It would be great if you could post the solution.

This error can occur if an old version of the extension was used with PHP 7 and some questions were created. Update

the extension to the latest version and execute the following SQL query (for example in PHPMyAdmin application or in AceSQL Joomla! extension):

```
UPDATE #__ariquizquestionversion SET Data = REPLACE(REPLACE(Data," ", " ", " ") WHERE Data LIKE '%%'
```

If execute the query in PHPMyAdmin, replace #__ with Joomla! table prefix.

Regards,
ARI Soft
