
A small custom code for convenience

Posted by stepan39 - 2017/07/10 09:42

Hello!

I want to see the number of questions in the column of the quiz line:

1. Specified in the quiz settings
2. Total in this quiz

About 20 / 45

Tell me sample code to add to the table quizzes.

On 2 points tried so, but does not work....

Thanks.

Hello,

Could you specify page(s) where you want to show it?

Regards,
ARI Soft

Thanks for reply!

I would like to put this data in the place I marked with a cross, instead of the last 2 icons I do not use
Screenshot

Thanks.

Data grid is populated dynamically. It loads data via AJAX and then populate the grid using javascript code. See "getQuizList" method in /administrator/components/com_ariquiz/models/quizzes.php file and "formatQuizActions" method in /components/com_ariquiz/assets/js/ari.quiz.js file.
