
Button EXPLANATION

Posted by stepan39 - 2017/10/03 14:18

Hello!
On my site in the quiz settings I use the parameter "SHOWEXPLANATION - YES"
When you activate this setting, a "Show Correct Answer" button appears in the questions.
When you click it, a table appears with the correct answers and an explanation (if any)

I want to modify the code for this page to get the following:

1. After clicking on the "Show Correct Answer" button, output only the explanation, without tables of answers.
2. When the explanation is displayed, the other answer button to the question should be inactive or hidden, because pressing it will still result in an error. in this dialogue one can not make a choice.

What changes should I make in the code? Can you help me with this?
Thank you.

Hello,

It requires modification of /components/com_ariquiz/assets/questions.js file.

I already understood this, but what code should I change?
My file questions.js is any custom and unpacked (you sent it to me).

∴

On 1 task everything turned out, I commented out the lines
'details': Q.statistics.getStatistics(result, true, true, this.extraParams),
'resultMessage': result.IsCorrect ? LM.getMessage('COM_ARIQUIZ_RESULT_CORRECTANSWER') :
LM.getMessage('COM_ARIQUIZ_RESULT_INCORRECTANSWER'),
'resultClass': result.IsCorrect ? 'aq-answer-correct' : 'aq-answer-incorrect',

Will you help me solve 2 task?

2. When the explanation is displayed, the other answer button to the question should be inactive or hidden, because pressing it will still result in an error. in this dialogue one can not make a choice.

If you want to disable all questions except a question with explanation, you can add a CSS class to quiz container element (for example aq-has-explanation) and add the following CSS rule:

```
.aq-has-explanation .aq-question-panel:not(.aq-show-answer) .aq-question-panel-content::after {  
    position: absolute;  
    top: 0;  
    left: 0;  
    width: 100%;  
    height: 100%;  
    background: rgba(0,0,0,0.5);  
    z-index: 1000;  
    display: block;  
    content: " ";  
}
```

No, I want to hide only the "answer" button while viewing the explanation.

You can add a javascript code to hide/show the button to "_showCorrectAnswer" and "hideCorrectAnswer" methods in questions.js file.
