
Images in the quiz questions list

Posted by stepan39 - 2017/11/03 07:59

Hi!

I often apply questions in the form of pictures (completely without text, as it is described in the conditions of the quiz). Unfortunately, in the list of quiz questions these pictures are not displayed and are forced to constantly go into the questions themselves to see them.

What changes should I make in the code so that I can see the pictures directly in the list of questions? The size of them can be limited by means of css (or others) for example up to 50px.

Thanks. <http://www.ari-soft.com/images/fbfiles/images/6767f9974e.jpg>

Hello,

See "formatQuestions" and "formatBankQuestions" methods in /components/com_ariquiz/assets/js/ari.quiz.js file.

Regards,
ARI Soft
