
Quiz anywhere

Posted by Ncldk - 2018/12/15 10:53

Hej

Joomla 3.9.1. Ari Quiz 3.9.17 and Quiz anywhere plugin.

The plugin is working ok, but when I place a quiz in a article ({ariquizanywhere quizId="ID"}{/ariquizanywhere}) it is shows up as a slim "column" test, abut the same size as a module, also with different scrolling settings and different editors.

Is there solution for this, your demos page seems to show "anywhere" in normal size when set into articles ? :huh:

Hello,

Is it possible to see the problem anywhere?

Regards,
ARI Soft

We can reproduce the problem. See the screenshot below please:

<http://www.ari-soft.com/images/fbfiles/images/quiz-296199223fdb7129979aef71f9e6ada1.jpg>

Could you provide exact steps how to reproduce the problem?

Regards,
ARI Soft

Hej

and thank you for your help.

This error can be reproduced by using IE 11.0.100 on windows 7 (64 bit), also if the temp files have been clinched from the browser.

So the problem is still real, and if there is solution for it, I wood like to know how.

Hej
Apparently arianywhere uses iframe.
I found that if I could get the "max-width: 100%; width:100%;" in side the code of the Iframe, then the problem would disappear in edge browser. But I don't know where to find the file where I can add to that code.
Maybe You can help ?

Sincerely Ncldk

Hello,

You can see element contains "aq-ic" CSS class name. It can be used to create a custom CSS rule for this IFRAME and add it to a site template CSS file. It will look like:

```
IFRAME.aq-ic {  
    max-width: 100%,  
    width: 100%,  
}
```

Hej

```
aq-ic
{
max-width: 100%;
width: 100%;
}
```

In
<http://???.com/templates/protostar/css/template.css>
does the tric. Its a problem specifik for the Joomla! 3 "Protostar" template.

Thank you
