
Components for AriQuiz 3.9

Posted by sorozco - 2019/02/15 17:22

Hello, we are migrating our Joomla 1.5 + CSubs site to Joomla 3.9 with the newest plugins.

We already downloaded the latest version of AriQuiz, but there are some plugins we use for the integration between CB and Ariquiz, like these:

ariquiz Learning path
arifibaseurl
alphauserpoints
ariquizupoints
cbariquizresultstab
ariquizincontent
ariquizanywhere

Where can I get the last versions?

And, my license is from 2012, I will install the new version in a new subdomain. Do I need a new license (renewal) or, can I use my original license?

Best regards

Hello,

"ARI Fix Base Url" is required only for J! 1.5. As we know AlphaUserPoints extension was replaced with AltaUserPoints.

All standard plugins can be install during "ARI Quiz" installation (the installer asks which add-ons should be installed/updated) or can be found in "backend/install/addons" folder from com_ariquiz.zip archive.

Regards,
ARI Soft
