
Percent Score

Posted by selimozbay - 2019/03/29 07:18

Hello,
When i want to show quiz results as percent it shows like 75%.
But in my language it must be like %75 :)
How can i do that? By language override or??
Thank you..

Hello,

You place % where you want. Open "ARI Quiz -> Text templates" page on component backend, choose the template which is used in the quiz and see {\$PercentScore} variable. Place % before the variable.

I asked that for result modules :) Not for text or mail templates..

Currently it is not possible to change format in module settings. It can be changed directly in module template. For example see /modules/mod_ariquizresult/tmpl/default.php
