
Quizzes Result problem

Posted by Paulob - 2019/07/06 13:28

Hello,
we have a problem in the QUIZZES RESULTS of ARI QUIZ. On 05/07/2019, we went to look at the all results of the quizzes and appeared only on 05/07/2019. We keep the results of all the quizzes already done to consult when there is a need. We looked at the bank and we have about 14.500 records. Could you confirm the table that stores the results of the quizzes and if there is a problem in the version we are using, which causes them to disappear from QUIZZES RESULTS? The version we are using - "ARI Quiz" v. 3.9.8, joomla is with version 3.9.8.

Thank you in advance for your help.

Hello,

Quizzes results are stored in #__ariquizstatisticsinfo and #__ariquizstatistics tables.

PS: We can investigate the problem if you provide a temporary access to your J! backend by email.

Regards,
ARI Soft
