
ARI Quiz not showing all questions

Posted by jim@nomadsailing.co.uk - 2019/08/06 10:38

Hi, I've created a quiz with 18 questions but frontend/website only shows the first two and cycles between them without showing any results.

Any ideas?

Many thanks

Jim

Hello,

Check "Question count" parameter in quiz settings/question category settings. If you want to show all questions, leave this parameter empty or use 0 value.

The system doesn't take answers into account till "Save" button is pressed. When click "Skip" button or navigate using page numbers, you can return to skipped question pages later and click "Save" button.

Regards,
ARI Soft

Thanks very much for the quick response - that's working now.
