
Plugin Support in answer options

Posted by stepan39 - 2019/08/12 09:38

Hi!

Is there any way to make Joomla plugins work (content, system etc.) in answer options?

For example (using the Allvideos plugin):

Option 1:

{mp3}Sorry{/ mp3}

Option 2:

{mp3}Yes{/ mp3}

Option 3:

{mp3}No{/ mp3}

What files need to be modified for this?

Thanks.

Deep silence... Is this impossible to do?

Hello,

The extension doesn't support this ability. It needs to modify code in /components/com_ariquiz/controllers/question.php file (see ajaxGetPage() method) and also in /components/com_ariquiz/assets/js/question.js javascript file. It needs to apply the similar approach like it is done for question text.

Regards,
ARI Soft
