Page reload between questions. Where is AJAX?
Posted by getafix - 2019/09/18 18:47
_____

Good day Ari Soft

Thank you for a great product so far.

I purchase this component for a client of mine because they run speed math tests. According to you on the Joomla component page the following:

"supports AJAX making the component more fast and powerful. AJAX technology lets user to pass test without page reloads - component will update all the page stuff itself"

Do I need to do something from my side to make the questions load the AJAX way, and not the page itself?

This is a bummer. The client cannot wait 3 to 4 seconds between questions. If he gets 10minutes to complete 100 questions, it means because of page reload he gets penalized by 300 to 400 seconds on the test. That means more than 5 minutes of the given 10minutes is lost on reload.

At this moment he wants his money back, and I am trying to remedy the situation. Because for the speed math quiz it is also not mobile friendly with the mobile phone/tablet qwerty keyboard popping up instead of a nice numerical touch keyboard, and one has to klick/tap in the answer box each time before one can type in it, because the focus is not already in the next question's answer box that one can just start typing the answer. Possible clients will rather go for other speed math websites because of this.
I really really hope I can have my client use Ari Quiz.

Hello,

The extension uses AJAX by default to load questions. It reloads page only if "ARI Quiz Reloader" plugin is installed and enabled.

Regards,
ARI Soft
